

**ANNUITIES** Single Premium Deferred

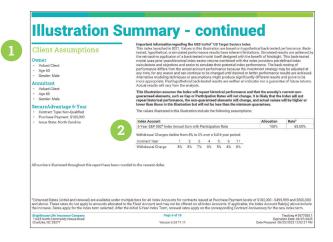

# **Brighthouse SecureAdvantage**<sup>®</sup> **6-Year Fixed Index Annuity**

Illustration Guide

This guide is intended to help you better understand the illustration for Brighthouse SecureAdvantage 6-Year Fixed Index Annuity. Illustrations use historical data from selected indices and demonstrate how performance may affect contract values and death benefits by applying current Participation Rates or Cap Rates. This sample illustrates a 6-Year Annual Sum with Participation Rate.

# **Illustration Summary Pages**

- 1. The Client Assumptions section displays information about the owner and annuitant as well as the contract type (qualified or non-qualified), purchase payment amount, and issue state.
- 2. This section reflects the elected Index Accounts or Fixed Account with the current rates (as of the date when the illustration was run) and withdrawal charge schedule.

#### Illustration Composite Summary

SecureAdvantage 6-Year illustration values are displayed as the sum of all underlying Index Accounts and the Fixed Account.

For example, if you elected to illustrate two Index Accounts, their combined performance would be shown here.

# **Historical Illustration**

- 1. This section reflects the Index Account, allocation amount to the Index Account, and the rates being utilized (Cap Rate, Participation Rate, fixed interest rate, and renewal rates).
- 2. The Anniversary section shows both the contract year and the client's age for each contract year.
- 3. Calculation Period Index Performance shows index performance over each 1-year period for an Annual Sum Index Account.
- 4. This section shows the crediting strategy chosen for the Index Account: Participation Rate or Cap Rate.
- 5. Calculation Period Performance Rate is the index performance for the 1-year period adjusted for the Participation Rate or Cap Rate.
- Full Performance Rate is unadjusted for time elapsed in an index term. The Adjusted Performance Rate is adjusted for time elapsed and is used in the Interim Value calculation.
- 7. The last row shows the values at the end of the initial 6-Year Index Term.

# **Point-to-Point Performance Section**

- 1. Calculation Period Index Performance shows the return of the selected index for the year, beginning December 31 (the start of the Calculation Period) to any day, including the last day, within the Calculation Period.
- 2. Participation Rate/Cap Rate displays the current New Money Rate.
- 3. Calculation Period Performance Rate is the Calculation Period Index Performance adjusted for the applicable Crediting Strategy and Floor Rate. At the end of each completed Calculation Period, the Calculation Period Performance Rate is stored and used to determine the Performance Rate.
- 4. Full Performance Rate, with Cap Rate or Participation Rate applied, is unadjusted for time elapsed in an index term. The Adjusted Performance Rate is used in the calculation of the Interim Value for each Index Account. For example, at the end of year one, the adjusted Performance Rate is 1/6 of the Full Performance Rate.

	Performance									
1	2	3	4 Performance Rate							
Calculation Period Index Performance	Participation / Cap Rate	Calculation Period Performance Rate	Full	Adjusted						
29.60%	65.00%	19.24%	19.24%	3.21%

-6.24%	65.00%	-6.24%	38.50%	38.50%						

# **Values Section**

- 5. Allocation Amount will remain the same for the length of the selected index term (unless a withdrawal takes place).
- 6. The Interim Value is calculated daily and reflects the Performance Rate adjusted by the amount of time elapsed in an index term. Interim Value applies to partial withdrawals or full surrenders (reduced by withdrawal charge and Market Value Adjustment if applicable) and annuitization.
- 7. Daily Performance Value tracks the daily valuation of the potential growth through each index term. This value is not guaranteed to be what clients will receive at withdrawal or annuitization before the end of the index term, nor does it reflect the actual value clients would receive at the end of the index term. The Daily Performance Value will always equal the Death Benefit Value for each Index Account.
- 8. The value highlighted in teal is the value at the end of the index term, which will be the starting allocation amount in the next index term.

Values									
5	6	7							
Allocation Amount	Interim Value	Daily Performance Value <sup>4</sup>

# **Historical Return Periods**

This page compares the performance of both the index and SecureAdvantage 6-Year in three separate scenarios:

- The most recent 10 calendar years
- The lowest index performance over 10 consecutive calendar years out of the last 20 years
- The highest index performance over 10 consecutive calendar years out of the last 20 years

Withdrawals of taxable amounts are subject to ordinary income tax. Withdrawals made before age 59½ may also be subject to a 10% federal income tax penalty. Distributions of taxable amounts from a non-qualified annuity may also be subject to the 3.8% Net Investment Income Tax that is generally imposed on interest, dividends, and annuity income if the modified adjusted gross income exceeds the applicable threshold amount. Withdrawals will reduce the death benefit and account value. Withdrawals may be subject to withdrawal charges.
